# Section:      576
# Assignment:   LAB Topic 7: go_moves
# Date:         23 October 2022
#create 9 by 9 board
#create list of lists filled with periods
#period indicates no value
#ask for x and y coordinates
#check whose turn it is and whether x and y coordinates are in bounds
#check if there is already a value on x and y coordinate
#if there is a value, send error message and prompt whether to continue game or not
#if x and y coordinates not in bounds, error message sent and prompt to continue game
#traversing the loop
#print game grid after each move and error
#changes players' turns
```
